HEAVY DUTY TRACK ROLLERS

For Food & Beverage

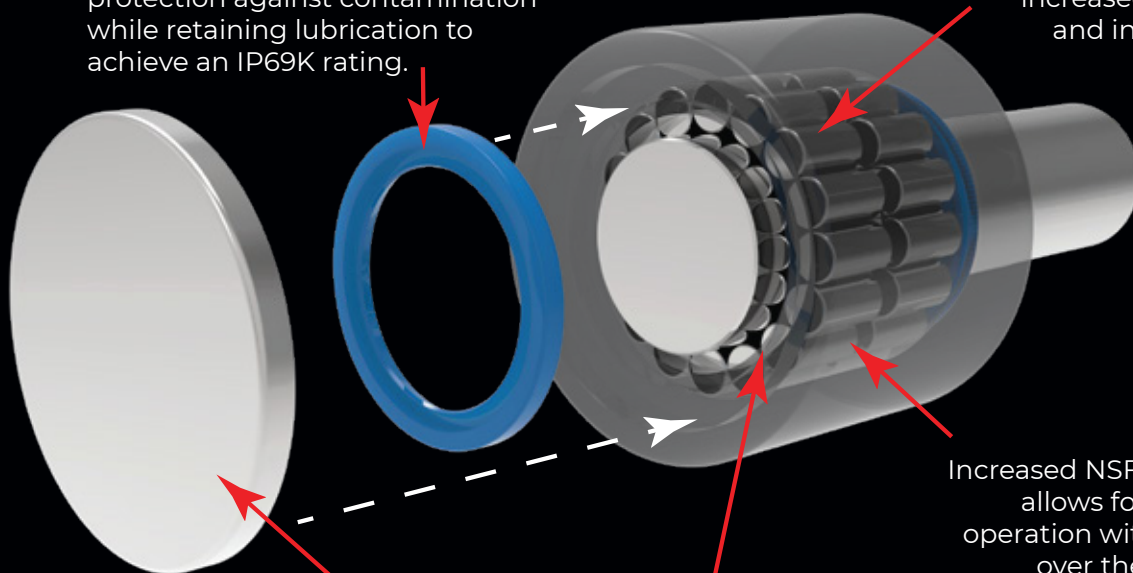

**Say Goodbye To Maintenance. Say Goodbye To Messes.
Say Goodbye To Downtime.**

RITETRAK WashPro™ track roller is Koyo's maintenance-free, drop-in solution for challenges faced by the Food & Beverage industry. Featuring heavy duty seals and shielding for IP69K certification, corrosion-resistant materials, and special double-row cylindrical roller internal geometry, Koyo's RITETRAK WashPro™ track roller increases life, reduces shutdowns, and keeps your processes rolling.

Robust lip seals provide additional protection against contamination while retaining lubrication to achieve an IP69K rating.

Larger diameter rollers result in increased dynamic capacity and increased service life.

Endcap shield provides enhanced protection against the intrusion of larger contaminants and direct spray during washdown.

Increased NSF H1 grease capacity allows for maintenance free operation without re-lubrication over the life of the bearing.

Improved roller guidance reduces running temperatures and allows acceptance of thrust load generated by misalignment.
